## Google

### Undetermined malware

Google has been claiming that this website has malware on it, this have been checked for malware, results of this check proved that this site is **clean** ! Google was ask to review this site and made the same statement. So I wiped the site and uploaded all the sites pages from their clean original files, then scanned the site again and confirmed that my website is clean. Then I ask google to check again, they did and they still manage somehow to find Undetermined malware

These pages directed users to a site that serves malware or unwanted software. Unfortunately, the malicious code within the page could not be isolated.

Google have not offered any proof that there is a problem....

I am force to wait several hours before I can re-submit for another review, at this moment the only thing I can think of is that they are deliberately attacking my site due the advertising company that I use BidVertiser - Pay Per Click Advertising On Sites Of Your Choice., my thoughts are that they want their advertising on my site, which I did try but that proved to be an utter waste, with that making a false claim that I was clicking the links myself, well I checked the ip addresses and not one of those ip addresses was mine, that was a fair few years ago, so I looked for a decent honest company to help provide revenue for my website, which I found with Bidvertiser and Matomy SEO formerly Smart Link Marketing by Text Link Ads.

What Google is doing is wrong, very wrong, they are a corporation, they are not the internet authority, they do not have the right to imposed themselves as such. They need to stop as they have gone too far. I will write again once this has been sorted out.
